## *Documents Now Available for Public Comment*

Two documents were posted for public comment on the SGIP Governing Board site on Friday, April 1. These documents are now available for your review and comment through April 20, 2011. These documents include:

- **Standards Catalog Process and Structure**: After many months of collaboration with SGIP members, the SGIP Plenary Leadership team, the Governing Board, the Bylaws and Operating Procedures Working Group (BOPWG), and the Intellectual Property Rights Working Group (IPRWG), this document will be voted on by the Governing Board following the comment period.
- **PAP 18 Proposal for SEP 1 to SEP 2 Transition and Coexistence**: During last week's Governing Board meeting in the Nashville F2F, the GB determined that there was an immediate need to create a Priority Action Plan (PAP) that focuses on developing specific requirements that must be met to allow for the coexistence of the ZigBee Alliance SEP 1.x and 2.0 and to support the migration of 1.x implementations to 2.0. This proposal was created and the membership briefed at the Plenary meeting last week in Nashville, was forwarded to Governing Board members, and will be voted on by the Governing Board following the comment period.

**These documents are available at: http://collaborate.nist.gov/twiki-sggrid/bin/view/SmartGrid/SGIPGBDocumentsUnderReview. There is a comment area on the TWiki page for each document. Your comments will be collected and forwarded to the Board members on April 15.**

As a courtesy to SGIP members, a third document has been posted that individual members of the Governing Board have created in response to the FERC Technical Conference on Smart Grid Interoperability Standards (RM11-2-000) held January 31. FERC is seeking comments on the processes involved, FERC's role in Smart Grid standards adoption, and how to define "sufficient consensus." The posted document contains the views of these individual Governing Board members and is not intended to be a reflection of the entire Board or the SGIP as a whole. The document will be emailed to FERC on Thursday, April 7 – the day before the filing deadline.

## *SEP 1 to SEP 2 Transition and Coexistence Informational TWiki Page Established*

As part of the PAP proposal process and in anticipation of a potential PAP to support SEP 1 to SEP 2 Transition and Coexistence, an informational site has been established. This site includes the background information and proposed tasks and deliverables for this effort. Based on public comments and a Governing Board decision, the content of the informational page may change, but will be used as the baseline site if and when a PAP is determined by the Governing Board to be established.

**You can view this and other proposed PAPs at: http://collaborate.nist.gov/twiki-sggrid/bin/view/SmartGrid/PriorityActionPlans#Proposed_Priority_Action_Plans.**
