Scytl eBallot Delivery

Enables military and other remote and absentee voters to receive and return ballots electronically via secure online transmission

**Scytl eBallot Delivery** allows for secure ballot delivery to remote voters which can increase participation and efficiency. After completing absentee ballot requests, voters receive their ballots online. They have the option of returning through mail, fax, email or online, depending on local legislation.

Ballots can be marked on-screen through a secure marking utility that prevents common errors such as over-voting or under-voting. Voters also have the option to print the ballot and mark it by hand. Plus, they can track the status of their ballots through the system.

- Ballot return made easy through mail, fax, email or online options.
- Easy to use on-screen marking with detailed information for ballot return.
- Voter privacy, data masking and ballot choice data bar codes ensure the highest level of security.
- Eliminate absentee ballot re-making.

“We wanted to modernize our elections process and provide an online voting alternative to fax. The solution had to offer a secure option for ballots to be received and returned online. The Scytl solution was selected and we implemented it for the 2012 Presidential election. We had a very positive response from voters with over 7000 ballot returns made through the secure Scytl eBallot Delivery system.”

**Gail Fenumiai**
Director, Division of Elections
State of Alaska

Scytl eBallot Delivery makes it easy for UOCAVA and other absentee voters to vote
Scytl eBallot Delivery makes it easy for UOCAVA (Uniformed and Overseas Citizens Absentee Voting Act) and other remote and overseas voters to obtain their ballot, cast their vote and track the ballot in real time.

Web services let you import registered voters and keep them updated
Secure Scytl eBallot Delivery lets election officials upload initial voter information from your current voter registration system and run periodic updates during each day of the election process. This ensures that all UOCAVA and other overseas and absentee voters are in the system correctly and will be able to receive and return ballots for the contests in which they are eligible to participate.

Voter portal provides voting information and access to their ballot
Those who have completed the FPCA process and requested to receive their ballot electronically will receive an email with a link to the secure Scytl eBallot Delivery web portal where they can access voting instructions unique to your voting process. They can also access their electronic ballot. Once they complete voter authentication they can download a blank ballot along with all other materials such as instructions, an affidavit certificate, return mailing envelope or electronic transmittal instructions as defined by election officials. Those choosing to mark their ballot online will be directed to the marking wizard. Scytl eBallot Delivery ensures voter anonymity and privacy. Once satisfied with their selections voters can print the marked ballot and return it via mail, fax, email or online depending on local legislation. They can then track the status online.

Bar codes eliminate absentee ballot re-making
Scytl eBallot Delivery includes a bar code feature that provides an automated conversion of returned ballots for optical scan tabulation. This feature results in significant cost and time savings in the processing of absentee ballots.
Voter privacy is protected
Scytl eBallot Delivery is the only solution on the market that provides the highest levels of security in terms of voter privacy, voter verifiability, election integrity, system availability and access control. Scytl’s on-screen ballot marking utility implements a specialized masking protocol in the voter’s device that ensures the voter’s choices are never known by the online platform or by any third-party device, preventing system administrators or malicious attackers from violating voter privacy. Special Ballot Choice Bar Code (BCB) automates the conversion of on-screen marked ballots into 2D bar codes which can be quickly and accurately duplicated for tabulation by an optical scanner without compromising the voter’s privacy.

Scytl eBallot Delivery collects a wide array of data and statistics during the secure process of permitting voters to mark their ballots. Some examples of reports available include:

- Percentage of ballots returned and submitted for counting
- Number of ballots returned after the state’s deadline
- Number of ballots downloaded multiple times from the same user
- Number of ballots downloaded from a foreign IP address
- Number of ballots downloaded from a domestic IP address
- Total ballots returned by postal service
- Total ballots cast per type of voter
- Total ballots downloaded per type of voter
- Total number of ballots sent per transmission method
Scytl is the global leader in secure online voting, election modernization and eGovernance solutions. Scytl offers the first end-to-end eDemocracy platform, providing the highest security, transparency, accessibility and auditability standards currently available.

Scytl eDemocracy Platform

Helping organizations around the globe improve participatory democracy, citizen empowerment and public transparency via innovative technology that covers the election and governance cycles from end-to-end.

Pre-Election

Scytl's solutions assist election administrators with the planning, organizing and training activities that accelerate as each new Election Day approaches. From tracking campaign contributions, training poll workers, registering voters and delivering eBallots to overseas and military voters, Scytl provides efficiencies for elections and the officials that conduct them.

Election Day

During Election Day, the most critical period of the election cycle, election officials can rest assured that robust and user-friendly tools are being utilized both by election administrators and voters. Whether in-person or remotely, voters will experience a state-of-the-art web interface to answer questions and cast their vote.

Post-Election

After Election Day, work is far from over. This is where some of the most important steps take place to ensure accuracy and effectiveness of the voting system, aggregate and present election results for public consumption, and use the information learned from this election to make the next one even better.

eGovernance

Scytl provides the tools and technology to help manage civic and political actions during terms in office between election cycles. Government bodies and politicians can better communicate with and engage citizens by seeking opinions and promoting ongoing dialogue as well as monitor public opinion to incorporate them into electoral programs. In addition, legislative bodies can regulate agendas and facilitate in-chamber voting sessions.
